CLAIM AMENDMENTS

1-6. (Cancelled)

7. (Currently Amended) A shopping cart, which is nestable into a preceding, similarly constructed cart and into which a following, similarly constructed cart is nestable, comprising:

a chassis, which has a front end and a back end, which has front and rear casters, including two rear, transversely spaced casters, and which has two generally longitudinal members, each extending along one side of the chassis, between the front and back ends of the chassis;
camming members mounted on the chassis and a transversely extending member bridging the generally longitudinal members; and
an upright frame member including upright legs with lower tubular ends, said lower tubular ends being secured to the generally longitudinal members in a substantially parallel orientation thereto at a position intermediate the chassis front and back ends with said lower tubular ends extending toward said chassis front end from said upright legs;
wherein said camming members are
mounted to the front ends of the lower tubular ends, and
adapted to upwardly cam the transversely extending member of a preceding, similarly constructed cart into which the shopping

cart is being nested, so as to elevate the rear casters of the
preceding shopping cart, and ~~The shopping cart of claim 6,~~
wherein each of said camming members has ~~have~~ a socket in which one of
the frame member lower tubular ends is received.

8. (Currently Amended) The shopping cart of claim 7, wherein
each of said camming members has ~~have~~ a plug snugly fit in one of said frame
member lower tubular ends.

9. (Currently Amended) The shopping cart of claim 8, wherein
said plug defines a semi-cylindrical chamber in said socket, and said one of said
frame member tubular ends defines a generally cylindrical wall snugly fit in said
chamber.

10. (Previously Presented) The shopping cart of claim 7, wherein,
for each camming member, said socket has a front end defining a limit to
movement of the camming member toward the back end.

11. (Currently Amended) The shopping cart of claim 10, further
comprising a locking pins extending transversely through each camming member
and lower tubular end received therein.

12. (Previously Presented) The shopping cart of claim 11, wherein said locking pin is a rivet.

13. (Currently Amended) The shopping cart of claim 7 6, wherein said camming members are molded polymer.

14. (Previously Presented) The shopping cart of claim 13, wherein said polymer is nylon.

15. (Cancelled).

16. (Currently Amended) A shopping cart, which is nestable into a preceding, similarly constructed cart and into which a following, similarly constructed cart is nestable, comprising:

a chassis including two generally longitudinal members each extending along one side of the chassis between front and back ends of the chassis;

front and rear casters secured to said chassis, said rear casters including two rear, transversely spaced casters;

a transversely extending member bridging the generally longitudinal members;

an upright frame member including upright legs with lower tubular ends, said lower tubular ends being secured to the generally longitudinal

members in a substantially parallel orientation thereto, said frame member being intermediate the chassis front and back ends with said lower tubular ends extending toward said chassis front end from said upright legs; and

cam members mounted to the front ends of the lower tubular ends, said cam members being adapted to upwardly cam the transversely extending member of a preceding, similarly constructed cart into which the shopping cart is being nested, so as to elevate the rear casters of the preceding shopping cart. The shopping cart of claim 15,

wherein each of said cam members has have a socket in which one of the frame member lower tubular ends is received.

17. (Currently Amended) The shopping cart of claim 16, wherein each of said cam members has have a plug snugly fit in one of said frame member lower tubular ends.

18. (Currently Amended) The shopping cart of claim 17, wherein said plug defines a semi-cylindrical chamber in said socket, and said one of said frame member tubular ends defines a generally cylindrical wall snugly fit in said chamber.

19. (Previously Presented) The shopping cart of claim 16, wherein, for each cam member, said socket has a front end defining a limit to movement of the cam member toward the back end.

20. (Currently Amended) The shopping cart of claim 19, further comprising a locking pin extending transversely through ~~both~~ each cam members and lower tubular end received therein.

21. (Previously Presented) The shopping cart of claim 20, wherein said locking pin is a rivet.

22. (Currently Amended) The shopping cart of claim 16 ~~15~~, wherein said cam members are molded polymer.

23. (Previously Presented) The shopping cart of claim 22, wherein said polymer is nylon.
